

Seabulk Goes Green for 2023

Seabulk is pleased to announce our continued participation in a US-based carbon offset program to neutralize all carbon emissions from our harbor towing jobs in Port Arthur, Lake Charles, Mobile, Tampa, Miami, Port Everglades, and Port Canaveral.

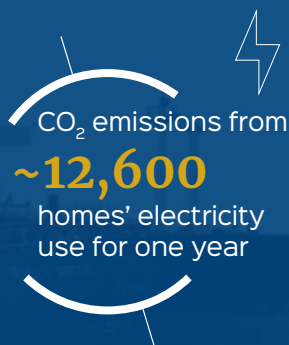

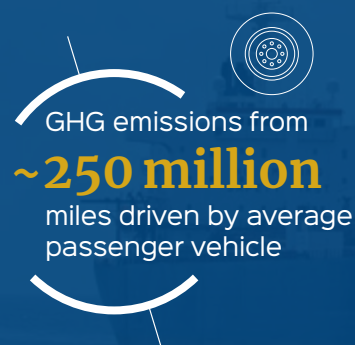

As a responsible and environmentally conscious marine solutions provider, we are committed to adopting cutting-edge technologies and reducing our carbon footprint. Through our parent company, SEACOR Holdings Inc., Seabulk is a proud member of the Global Maritime Forum's Getting to Zero Coalition and stands in support of the decarbonization of the shipping sector.

By the end of 2023, Seabulk will have displaced a **total** of approximately

100,000

metric tons of CO₂ since the program's inception.

This is the equivalent of...

GHG = Greenhouse Gas, CO₂ = Carbon Dioxide
Calculated by the U.S. EPA Greenhouse Gas Equivalencies Calculator
and internal estimates
